

ROCOFLUID-C

(ANTI CREASING AGENT)

Rocofluid-C is a special anti creasing agent, which efficiently reduces the friction between fibres and fibres-dyeing tank that prevents creases or scratches, due to its smoothing and softening effects. The main ingredient of anti creasing agent is special polymer dispersion. It can prevent the rope from creasing in the pre-treatment (scouring, boil bleaching), dyeing and post-processing. After using anti creasing agent, it can make the material feel more thick, smooth, and the synthetic fiber fabric more durable hydrophilic, antistatic and easier to decontaminate. Anti creasing agent has the advantages of low foaming and excellent stability, suitable for all kinds of fabrics, especially knitted fabric pretreatment, dyeing, and post-processing. It is also applicable to the printing and dyeing processing. Anti creasing agent is environmental-friendly and non-dangerous, which can be shipped safely.

Main composition : Special Polymer.

GENERAL PROPERTIES

Appearance : Colorless To Pale Viscous Liquid
Ionicity : anionic
pH : 5-7
Solubility : Easily Soluble In Water
Stability : Stable To Hard Water, Electrolytes, Mild Acid And Alkali

PRODUCT FEATURES

1. Mainly for cotton, polyester and its blends.
2. Efficiently prevents creases of rope fabrics during pretreatment (scouring, boil bleaching), dyeing and finishing.
3. No influence on shade and fastness.
4. No foam and stable to high temperature that can be used in jet dyeing machine and dye at 130 degree

APPLICATION

General Dosage: 1-5 g/L

To achieve best anti-creasing performance, please run the fabrics in softening bath for 5 to 10 minutes, and then run as normal operation.

PACKAGING AND STORAGE

125 kg/polyethylene drum, 6 months in sealed container at room temperature
